RAKSHITH SUBRAMANYAM

rakshith.subri@gmail.com · rakshithsubri.com · linkedin.com/in/rakshith-subri · github.com/Rakshith-2905

Technical CPO and founding engineer who built AI products and the team behind them from zero. Runs the loop from market research to product design to build and launch in rapid cycles, and still ships code. First author on 5 papers at ICML, ECCV, ICASSP and WACV.

SKILLS

Leadership: team building · roadmap and product KPIs · customer discovery · deals and expansion · pilot to production
AI systems: multimodal LLMs · RAG · agents · evals · guardrails · knowledge graphs · computer vision
Engineering: Python · TypeScript · PyTorch · TensorFlow · Docker · CI/CD

EXPERIENCE

Axio.ai · Founding Engineer → Chief Product Officer — Jul 2024 – Present
AI learning platform for higher education · promoted from founding engineer to CPO in two years

- Own the engineering org, product roadmap and product KPIs.
- Launched all 3 products: AI tutor (98% retention, 94% completion), student companion and course modernizer (5 to 23 faculty in one semester).
- Represented product and technology in every institutional deal and expansion, helping grow revenue from pilots to signed license agreements.
- Scaled engineering from 5 to 13 across 4 squads; shipped 3× faster with 2.5× fewer bugs.
- Opened access to 10,000+ students across institutional customers; 25,000+ interactive learning activities created.
- Embedded with faculty and institutional buyers; turned recurring requests into reusable platform features.
- Set CI/CD, testing and eval standards; moved engineers to owning features end to end.
- Built the core AI platform: a multi-agent multimodal tutor that personalizes learning through the knowledge graph, production RAG (60% lower latency) and the course modernizer.

Lawrence Livermore National Laboratory · Research Intern — 2021 – 2023

- Researched reliable vision models under distribution shift across 5 projects.

SRI International · Computer Vision Research Intern — 2020

- Built transformer-based pedestrian tracking; weak-supervision auto-labeling cut annotation 60%.

Luminosity Lab, Arizona State University · Lead AI and Image Processing Researcher — 2016 – 2024

- Built multi-camera tracking systems; U.S. patent application 17/998,142.
