RAKSHITH SUBRAMANYAM

Ph.D. Electrical Engineering(ASU, 2019–2024)

Mesa, Arizona | 480-543-0995 | rakshith.subri@gmail.com | rakshithsubri.com | linkedin.com/in/rakshith-subri

VP of AI and Product at Axio.ai — promoted from Lead AI through Head of AI in 2 years — owning end-to-end product development: research customer problems, prototype solutions, validate with users, scale to production. Lead 13 engineers building AI education platform (multimodal tutors, multi-agent course modernization); build fast, manage tech debt deliberately, balance customer needs with innovation.

TECHNICAL EXPERTISE

AI Systems: LLMs • GenAI • Agentic AI • Multimodal AI • Uncertainty Calibration • Knowledge Graphs • Image Generation • Interactive Simulations • Multi-Agent Systems

Leadership: Research-to-Production Pipeline • Product Roadmap & Vision • Team Building (5→13) • Fast Shipping + Tech Debt Management • Systems Architecture

Stack: Python • PyTorch • TensorFlow • LangChain • OpenAI API • Docker • FastAPI • MLOps

PROFESSIONAL EXPERIENCE

Axio.ai | July 2024 – Present

VP of AI and Product (Mar 2026–Present) ← **Head of AI** (Jul 2025–Mar 2026) ← **Lead AI Researcher** (Jul 2024–Jul 2025)

Multimodal AI Tutor

- Built guardrailed LLM tutor with real-time personalization and learner state tracking
- Integrated knowledge graphs (domain reasoning), uncertainty calibration (reliability), and interactive simulation engines (hands-on learning)
- Optimized production RAG: 60% latency reduction, 28% precision improvement

Multi-Agent Course Creation & Modernization

- Designed multi-agent system for universities to create and modernize courses on demand
- Built PPT/video generation with academic rigor, image generation (+10% prompt-to-image accuracy vs Gemini Pro), and internet-scale RAG for content sourcing
- Validated with institutions and scaled to production

Product & Team Leadership

- Own product roadmap; research customer problems, prototype, validate with users, scale to production
- Scaled team 5→13; transformed developers into systems architects owning features end-to-end
- Achieved 3x faster shipping; balance roadmap, customer bugs, and tech debt explicitly each sprint

Summer Research Intern (3 seasons) | Lawrence Livermore National Labs | 2021–2023 (during Ph.D.)

- Published 5 papers in top venues (ICML, ECCV, ICASSP, WACV) on failure detection, visual reasoning, domain adaptation, generative models, and meta-learning

Computer Vision Research Intern | Stanford Research Institute | May–Aug 2020 (during Ph.D.)

- Built spatial-temporal attention pedestrian tracker (4 samples/sec); automated segmentation with weak supervision, cutting annotation overhead 60%

Control Systems & Robotics Engineer | Aptus Engineer Inc | Sep 2018–Mar 2019

- Developed Region-based CNN models for medical diagnostics; designed firmware and PCB solutions

PUBLICATIONS & PATENTS

DECIDER (ECCV 2024): Vision-Language Priors for Model Failure Detection
SPHInX (ICML 2022, Spotlight): StyleGAN-v2 Inversion for Out-of-Distribution Images
SiSTA (ICML 2023): Target-Aware Generative Augmentations for Single-Shot Adaptation
CREPE (ICASSP 2024): Learnable Prompting With CLIP for Visual Relationship Prediction
CAML (WACV 2023): Knowledge-Augmented Meta-Learning for Few-Shot Classification
Patent (2023): U.S. Application 17/998,142 — Smart Product Handoff Platform
